INTRODUCTION

The Madera County Transportation Commission (MCTC) is the Metropolitan Planning Organization (MPO), Regional Transportation Planning Agency (RTPA), and the Local Transportation Commission for Madera County.

The Commission's role is to cultivate intergovernmental coordination; perform comprehensive regional planning with an emphasis on transportation issues; provide a forum for citizen input into the planning process; and provide technical support and services to its member agencies. In all these activities the Commission strives to develop a consensus among its members concerning multi-jurisdictional transportation issues.

The Madera County Traffic Monitoring Program – Traffic Volumes Report has been developed as part of the FY 2007/08 Overall Work Program (OWP) of the Madera County Transportation Commission. This report is published annually and provides current and beneficial traffic count information for planning and engineering projects.

THE NEED FOR TRAFFIC COUNTS

The Commission's Traffic Monitoring Program is a beneficial data source for both public and private interests. Some of the most important uses are:

1. AIR QUALITY MONITORING

Federal regulations demand that an air quality planning program be established. Traffic counts identify vehicle types, speeds, and volumes to aid in determining levels of pollutants and their sources.

2. TRANSPORTATION MODELING

One role of the Commission is to maintain a regional traffic simulation model to assist in air quality and transportation planning. This model is dependent upon current and accurate traffic counts to aid in future transportation and development planning.

3. SIGNAL PRIORITIES AND CAPITAL IMPROVEMENT PROGRAMS

Each year agencies must budget for projects and improvements for the next fiscal year. Since funds are limited, project priorities must be set. Traffic counts assist in setting those priorities.

4. OTHER BENEFITS DERIVED FROM TRAFFIC COUNTS

- traffic volume growth rates
- traffic accident rates
- signal and stop sign warrants
- signal timing
- traffic noise levels

5. PRIVATE USE

Traffic counts are of service to private business. Uses include determination of location, and economic potential of a proposed business. Likewise, count data offers substantial benefit to real estate appraisal and financing decisions.

CONTENTS OF THIS REPORT

This report contains traffic count information at selected sites from 2003 through September of 2007. The report is broken down into four sections:

- Section 1 -- counts for outlying County locations
- Section 2 -- counts for the City of Madera
- Section 3 -- counts for the City of Chowchilla
- Section 4 -- counts for state highways (provided by Caltrans)

Section 1, Section 2, and Section 3 traffic counts are “raw” counts. A “raw” count is recorded at a particular location on a particular day for a period of 24 hours and is not adjusted to reflect day of week or seasonal variations which normally affect observed traffic volumes. While “raw” counts provide a good measure of traffic activity at a given location, caution must be exercised in the use of this information. Also, many of the counts are “directional” (i.e. East Bound, West Bound, etc.). To derive the total traffic volume for a location, both directional counts must be summed.

Section 4 provides Caltrans’ calculated Average Daily Traffic or ADT counts. ADT is estimated by applying seasonal adjustment factors to a raw count. An ADT is a mathematically derived description of the average number of vehicles which pass a given location on an average day of the year.

This report presents summary information about counts taken at the listed locations for a continuous twenty-four hour period. In many cases the base information is maintained to provide more detail about hourly traffic volumes, or in some cases, multiple counts are available for a given year. This information is available by calling the Madera County Transportation Commission at the number listed below.

<p><i>Madera County Transportation Commission</i> 1816 Howard Road, Suite 8 Madera, CA 93637 (559) 675-0721</p>	<p><i>County of Madera Road Department</i> (559) 675-7811</p>
<p><i>City of Madera</i> Community Development Department/City Engineer (559) 661-5418</p>	<p><i>CALTRANS District 6</i> Traffic Operations (559) 488-4248</p>

GLOSSARY OF TERMS USED

- #** The count number. This number is used solely to help identify yearly count locations for reporting and administrative purposes.
- Street Name** The street or road on which the count was taken. Generally the report is organized by jurisdiction (i.e. County of Madera, etc.) with street names sorted alphabetically.
- Location** The nearest cross street to where the count was taken. The location is a reference by direction from the count. For example, a count taken on Country Club Drive between Cleveland and Sherwood would read as:
- COUNTRY CLUB DR. N/O CLEVELAND AVE.
- where COUNTRY CLUB DR. is the Street Name
and N/O CLEVELAND AVE. is the location*
- Dir** The direction of travel of traffic being counted.
- 2003, 2004,...** The year in which the count was taken/reported.
- ADT** Average Daily Travel -- statistically derived expression of expected traffic on a given roadway for any given year. This number is adjusted for day of week and seasonal variations in travel.

COMMON ABBREVIATIONS USED

Street Names

AVE	=	Avenue	PKWY	=	Parkway
BLVD	=	Boulevard	RD	=	Road
BUS RT	=	Business Route	SR	=	State Route
BYP	=	Bypass	ST	=	Street
DR	=	Drive			
LN	=	Lane			

Direction of Traffic Counted

NB	=	North Bound traffic
SB	=	South Bound traffic
EB	=	East Bound traffic
WB	=	West Bound traffic
APP	=	Intersection Approach (NB APP = North Bound approaching traffic)

Direction From Nearest Intersection

N/O	=	North of
S/O	=	South of
E/O	=	East of
W/O	=	West of

PREFACE

Traffic Profile

This section lists 2006 traffic volumes for all count locations on the California state highway system. Peak hours, peak month ADTs (Average Daily Traffic) and annual ADTs are shown at each count location. Significant volume changes (breakpoints) in the traffic profile along each route are counted and identified by name and milepost value. In addition to the profile breakpoints, these files list county lines and well-known landmarks to aid in orientation. All traffic volume figures listed include traffic in both directions unless otherwise indicated.

Route Number

California state highways are listed in order of Legislative Route number.

Milepost

Each profile breakpoint is identified by the milepost value corresponding to that point on the highway. The milepost values increase from the beginning of a route within a county to the next county line. The milepost values start over again at each county line. Milepost values usually increase from south to north or west to east depending upon the general direction the route follows within the state.

The milepost at a given location will remain the same year after year. When a section of road is relocated, new mileposts (usually noted by an alphabetical prefix such as "R" or "M") are established for it. If relocation results in a change in length, "milepost equations" are introduced at the end of each relocated portion so that mileposts on the remainder of the route within the county will remain unchanged.

Annual Average Daily Traffic (Annual ADT)

Annual average daily traffic is the total traffic volume for the year divided by 365 days. The traffic count year is from October 1st through September 30th. Very few locations in California are actually counted continuously. Traffic counting is generally performed by electronic counting instruments moved from location throughout the State in a program of continuous traffic count sampling. The resulting counts are adjusted to an estimate of annual average daily traffic by compensating for seasonal influence, weekly variation and other variables which may be present. Annual ADT is necessary for presenting a statewide picture of traffic flow, evaluating traffic trends, computing accident rates, planning and designing highways, and other purposes.

Peak Hour

This list includes an estimate of the "peak hour" traffic at all points on the state highway system. This value is useful to traffic engineers in estimating the amount of congestion experienced, and shows how near to capacity the highway is operating. Unless otherwise indicated, peak hour values indicate the volume in both directions.

A few hours each year are higher than the "peak hour", but not many. In urban and suburban areas, the peak hour normally occurs every weekday, and 200 or more hours will all be about the same. On roads with large seasonal fluctuations in traffic, the peak hour is the hour near the maximum for the year but

excluding a few (30 to 50 hours) that are exceedingly high and are not typical of the frequency of the high hours occurring during the season.

Peak Month ADT

The peak month ADT is the average daily traffic for the month of heaviest traffic flow. This data is obtained because on many routes, high traffic volumes which occur during a certain season of the year are more representative of traffic conditions than the annual ADT.

Back and Ahead

Back AADT, Peak Month, and Peak Hour usually represents traffic South or West of the count location. Ahead AADT, Peak Month, and Peak Hour usually represents traffic North or East of the count location.
